Riga, LV-1006, Latvia

Marupe (Latvia), May 13th, 2020

Lightspace Technologies have worked together with EDI in research project 3Data in 2015 where EDI successfully implemented a blood-vessel three dimensional object extraction algorithm from human lung CT scans by using machine-learning algorithms to visualize on Lightspace Technologies multiplane volumetric image display. During the project, EDI proved to be an invaluable partner, listening and enhancing our ideas, while bringing a high quality know-how to the project. EDI managed to complete their activity within the planned budget and time frame, leaving us very satisfied. Quality of the results and the process itself demonstrated that EDI is a world-class partner for carrying out research-intensive image processing tasks. Lightspace Technologies fully recommends working with EDI as an outstanding research partner.

Sincerely,

A handwritten signature in blue ink, appearing to read "Madara", written over a light blue horizontal line.

Madara Kalnina-Kalmale
Managing Director
